Lots of things have happened recently, so here is a list in no particular order:

Added 'Remember Me' box on login so you don't have to keep logging in all the time. This isn't recommended for public computers, but for your home system, it should be fine.

Added the new [Surnames](#) module. This was built especially for RCHS, so it is really *new*! Please report any problems or any suggestions for improvements.

Fixed a configuration issue which made Photos pages about 10 times bigger (hence, slower) than they should have been.

Added notification options. You can subscribe to notifications for certain events so you can find out when things you are interested change. Make sure to check your setting under the [Edit Account](#) menu to set your *Notification Method* to e-mail if you want the notifications sent to your mail box, or private message to get a message here on the site. Of course, to make this work, you have to create an account and login!

Added a [site wide RSS newsfeed](#). Lots of modules have had 'local' RSS buttons, but this is one feed for the whole site. If you've never used a feed reader, you might not appreciate this, but if you have, you'll know how handy it can be to monitor the entire site at a glance along with other news you may want to follow.

Installed latest security patches for Xoops.

I'm sure there is more, but that is all that comes to mind right now.

Enjoy!
